

## **Data-intensive Computing in Cloud-based Infrastructures**

Winter Term 2017/2018

**Lecturers:** Prof. B. Mitschang, Dr. H. Schwarz and researchers of IPVS/AS  
**Contact:** Holger Schwarz, holger.schwarz@ipvs.uni-stuttgart.de  
**Study Programs:** Master Computer Science (STE), Master Informatik, Master Software-technik  
**Language:** English

### **Description**

This practical course mainly focuses on data-intensive applications and how they process, analyze and store their data. Nowadays, the amount of data in applications is growing intensely. This data can be either structured, e.g., stored in relational database systems such as MySQL, or unstructured, e.g., stored in text documents, pictures or other media files. Deriving information and, as a consequence, knowledge from this data is a huge challenge. To cope with this issue, new data analytics and data storage technologies have been developed that focus on the one hand on deriving information from this large amount of structured and unstructured data (e.g., data mining, natural language processing, ...) and on the other hand on efficient data storage (e.g., NoSQL databases, column-stores, ...). Modern web technologies are used to provide the web frontend and to visualize huge data sets and analytic results. Furthermore, to enable fast, efficient application development as well as a high degree of accessibility, flexibility and scalability, cloud computing platforms are oftentimes used to implement such applications.

In this practical course, you will work in small teams. Each team will implement a new or extend an existing data-intensive application based on tasks that typically involve data analysis, data visualization, data storage and efficient data processing. The used infrastructure, e.g. a cloud-based infrastructure like IBM Bluemix, depends on the application.

### **Prerequisites**

Basic knowledge on database systems and information systems is required.

### **First Meeting**

The first meeting will be in KW42. The date will be published on the web page mentioned below.

### **Remarks**

This course is primarily offered for students of the Master Computer Science (STE), Master Informatik and Master Softwaretechnik. Students from other programs may participate if there are not enough participants from the above mentioned study programs. Participants will work in small teams of typically three students.
